## Files

We built a parser in this project. The files we wrote are

- *wumbo.cup*: The file for JavaCup input, including declaration, precedence&associativity, grammar and translation.
- *ast.java*: The file to make sure our parser works correctly. For each node, we wrote an unparse function.
- *test.wumbo*: The test case for our parser, including basically all the possibilities allowed by wumbo grammar.
- *test.out*: The parse result for test case.

## Testing

To test our file, first navigate to the project folder, and then execute the following command

```
> make; make test
```

The output of test case will be automatically written to *test.out*.
